

SUMMARY

I'm a Software Engineer with a focus on Java, passionate about automation and building complete, reliable systems. I enjoy developing and maintaining end-to-end solutions from backend services and APIs to frontend features, infrastructure, and CI/CD. While Java is my main language, I also like working with JavaScript and keep experimenting with practical tools that deliver real business value. Lately, I enjoy experimenting with AI, building agent flows and pipelines, and using and building MCP so development stays more productive, clean, and maintainable.

EXPERIENCE

Software Engineer

Jun 2020 - Present

foryouandyourcustomers

Sofia, Bulgaria | Full-time

- **Designed** and deployed **Java microservices** and **ETL** pipelines on **Kubernetes** to modernize data **transformation flows**, enabling reliable processing across **distributed systems**.
- **Collaborated** with Product Owners to define and refine **backlog** items before **sprints**, reducing scope misalignment and keeping development aligned with product **goals**.
- Reviewed **Pull Requests** for quality and security across a **cross-functional team**, maintaining consistent engineering standards and **catching defects** early.
- Introduced unit and integration **test coverage** for critical services, supporting stable releases and **reducing production incidents**.
- Proposed and **documented architectural improvements** to address growing system complexity, resulting in a cleaner, more **maintainable codebase**.

Java, Spring Boot, React, Kubernetes, Azure, Jenkins, MongoDB, ETL, CI/CD

Software Engineer

Jan 2022 - Present

Ispolink

Remote | Part-time

- **Designed** and **maintained** scalable **cloud infrastructure** on **AWS** using **Terraform**, providing a reproducible, **infrastructure-as-code** foundation for all production services.
- **Built** and **deployed backend microservices** integrated with databases and **third-party APIs**, expanding platform capabilities and enabling new product features.
- **Wrote** and **maintained CI/CD** pipelines with **GitLab CI/CD** and **Jenkins**, automating delivery workflows and **reducing manual release effort**.
- **Monitored** and **debugged cloud services** across environments, proactively identifying and resolving issues to **minimize downtime**.

Java, Node.js, AWS, Terraform, Jenkins, GitLab CI/CD, Microservices, Solidity

Full Stack Developer

Jun 2017 - Jun 2020

Intershop Communications AG

Sofia, Bulgaria | Full-time

- **Developed** and **maintained Java** and **Angular** web applications integrated with the Intershop **eCommerce** platform, delivering stable client-facing features on schedule.
- **Designed and implemented REST APIs** for platform integrations, providing a stable and well-defined interface for **third-party connectivity**.

Java, Angular, Intershop, REST APIs, SVN, Jira

Junior Java Developer

Oct 2015 - Jun 2017

Methodia

Sofia, Bulgaria | Full-time

- **Built Java components** for the Openbravo **ERP** platform to extend core functionality and meet new business requirements.
- **Debugged and resolved platform issues** across feature and compatibility work, restoring stable behavior and preventing regression.
- Developed and **tested platform** changes with a focus on stability, ensuring consistent behavior across releases.

Java, Openbravo ERP, IntelliJ IDEA, Jira

EDUCATION

Technical University at Sofia

Bachelor's Degree in Computer Systems and Technologies · 2012 - 2016

Faculty of Computer Systems and Technologies
